DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-23 are rejected under 35 U.S.C. 103(a) as being unpatentable over **Lipman US patent 4,949,022** in view of **Raad US patent 5,365,133**.

Lipman'022 discloses a brush less motor (column 1 line 6), comprising a rotor (40 column 3 line 44) ,a hollow hub (46,48, column 3, line 52,53), and plurality of magnet poles (52 column 3 line 61), the hollow hub having at least one aperture at each end to form at least one first passage extending through the hollow hub(Fig. 2 , 4 opening at the left side and opening at the right side , the passage there between),the rotor having vanes fixed to the hollow hub to force air through the hollow hub (Fig. 2.,3), wherein the vanes are located in the at least one passage (Fig.2), the vanes are located at the at least one aperture (Fig.2,4), wherein the vanes are arranged to drive air in the same direction, a stator surrounding the rotor (54 , 72 Fig. 4,6), an outer casing (12 column 3, line 6),the electromechanical device is a brush less machine (column1 line 6), wherein at least one second passage extend through the stator (76 ,74, column 5, line 56,57).

However **Lipman'022** fails to teach a sealed casing around the rotor so that coolant (air) flows in a closed sealed casing.

Raad'133 disclosed an electrical machine having a sealed casing around the rotor (72,78. Column 5 line 4) for the purpose of keeping the coolant in a closed area. Therefore it would have been obvious to one having ordinary skill in the art at the time the invention was made to combine **Lipman'022** motor with a sealed casing as taught by **Raad'133** for the purpose of sealing the cooling area.

Response to Arguments

Applicant's arguments with respect to claims 1-23 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
